

SPECTRUM ELITE TRIMS

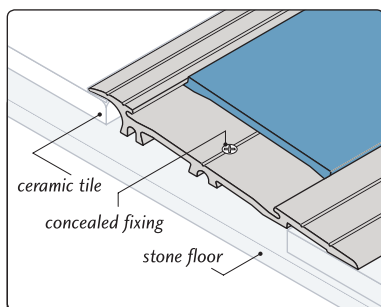

Elite trims have been designed for use in the most demanding environments for safe and easy transition between adjoining floor coverings where frequent heavy foot and wheeled traffic can be expected e.g. railway stations, airports, transport interchanges, department stores and hospitals.

Elite trims comprise an aluminium base channel with the added feature of secret fixing and a choice of slip-resistant **Elite inserts**. Standard interior insert is available for interior dry conditions.

Available in 2.5m lengths.

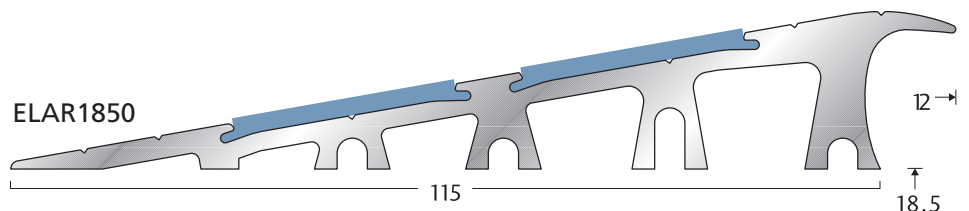

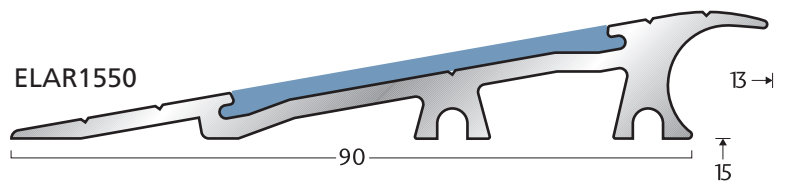

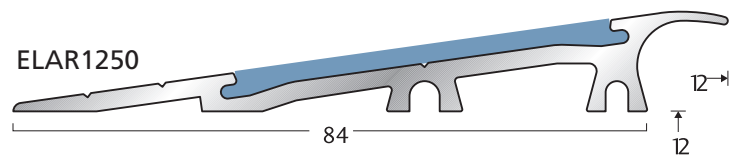

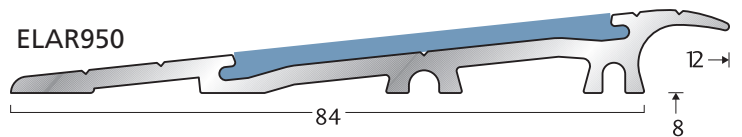

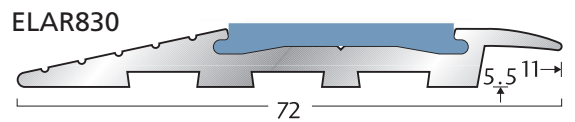

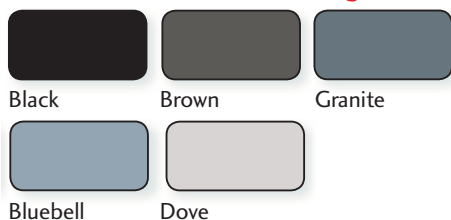

We welcome your enquiry for free samples and complimentary technical advice. Please contact your local distributor or Freecall 1800 888 256

typical example

ELAR950 ceramic tile to stone floor
 Note: shown with gap between profile and ceramic tile to allow for natural expansion.
