The unique **SWITCHTEC** dry adhesive technology

SWITCHTEC dry adhesives are pre-dried in the factory and are self adhesive. The adhesive is pressure sensitive ensuring maximum strength is obtained during application.

In flooring technology **SWITCHTEC** dry adhesives provide an alternative to the use of liquid adhesives and offer substantial additional benefits, such as the saving of time and costs.

After adaption to the different substrates, the adhesives are applied to both sides of a PE film with several different special coatings and are wound into rolls.

SWITCHTEC dry adhesives are the result of many years of development and cooperation between the SIFLOOR Laboratory, Production and Application Technology departments.

SWITCHTEC dry adhesives pay off

- More than 20% of costs saved in comparison with the tearing out of the existing floor covering
- Minimal loss of use / interruption to operation
- No dust, noise, dirt
- No odours
- Can be used immediately
- Less disposal costs
- No residual or processing toxins, such as solvent, high boiling point elements, formaldehyde, chlorine
- Reduces the impact on tenants
- The laid floor covering can be removed again without residue at a later date

removal without residue

Example Renovation 80m²: With **SWITCHTEC**, you save time and renovate up to 25% cheaper (not including loss of output costs)
