CLEANING AND CARE INSTRUCTIONS

Spectrum Portal Plus

Spectrum Portal Plus dirt barrier zone is designed for use in entrances of buildings to stop the ingress of dirt and water from the outside. Therefore they become soiled with use. This dirt has to be removed in order to keep the Portal Plus dirt barrier zones effective.

1. DAILY

Thoroughly vacuum to remove grit, sand and dust. The pile should be agitated. Vacuum cleaners equipped with powerful suction and a rotating brush is most effective in dealing with this task. A vacuum cleaner is effective on dry soiling. It must be in good working order.

2. Periodically

Portal Plus will collect grease and other sticky substances. A vacuum cleaner is ineffective. A water extraction machine is required to remove greasy soiling. Heavily soiled areas should be pre-treated before the machine is used. It is also recommended to run the machine with clean water (no detergents) to remove the last residues of soiling and detergents. It is important to remove residues of soiling and detergents, as residues will contribute towards shortening the areas. The dry powder is worked into the pile, left to absorb the soiling and then vacuumed out. Spot cleaning for any stains can be treated with ***Spectrum Elatex***.

When machines and chemicals are used, the instructions of the manufacturers must be closely followed.
